**⚠ WARNING** Failure to follow these warnings could create a risk of serious injury.

Proper maintenance and handling procedures are critical. Always follow installation instructions and maintain proper lubrication.  
Do not attempt to disassemble and reassemble unitized wheel-end hubs and bearing assemblies. Improper reassembly could lead to failure.

**⚠ CAUTION** Failure to follow these cautions could create a risk of injury.

*If a hammer and bar are used for installation or removal of a part, use a mild steel bar (e.g., 1010 or 1020 grade). Mild steel bars are less likely to cause release of high speed fragments from the hammer or bar or the part being removed.*

Please note: Tech Tips is not intended to substitute for the specific recommendations of your vehicle manufacturer. Depending on the application, type of hub assembly and location, processes may vary. Please review the vehicle manufacturer's recommendations before removing or installing components.

### 01 CLEAN WHEEL END COMPONENTS

Remove all residual lubricant and thoroughly clean. Protect against corrosion if bearings are not to be replaced straight away. Fully inspect bearings and, if damage is observed refer to the Timken Bearing Damage Analysis wall chart for identification of damage and take appropriate action to correct - Replace all doubtful bearings.

---

### 02 BEARING CUP REMOVAL

Using a mild steel bar as a driver, remove both bearing cups, alternate strike to ensure cup does not cock and damage hub. Do not use brass, copper or aluminum as drivers as these could result in damage to the bearings.  
Use scallops in shoulder where present.  
Ensure driver does not contact cup seat/hub bore.

---

### 03 SPINDLE CLEANING AND INSPECTION

Remove all residual lubricant and inspect spindle, shoulder, threads and keyway for damage and wear.  
Remove all high spots and burrs with a file, polish with emery cloth.  
Check bearing seats for excessive wear.  
Repair or replace spindles if damaged or worn excessively against the manufacturer s service manual.

---

### 04 CUP SEAT CLEANING AND INSPECTION

Remove all residual lubricant and inspect cup seats and shoulders for damage or wear - Remove all high spots and burrs with a file or emery cloth.  
Wear in hubs will reduce interference fit of cups.  
Repair or replace as required in line with the manufacturer s service manual.

# Maximising Truck Wheel Bearing Performance

## 05 CUP INSTALLATION

Using appropriate specified driver tool or mild steel bar ensure the cups progress squarely into their respective seats.

Listen for the change in strike pitch that indicates that cup is seated correctly. Correct seating against shoulder can be checked with 0.051mm (0.002 ) feeler gauge.

---

## 06-A GREASE LUBRICATION (CONES)

Completely fill bearing cones in area under cage, between all rollers by forcing through from roller large end until grease protrudes from small end.

Coat outside of cage and rollers with grease.

---

## 06-A GREASE LUBRICATION (HUB)

Grease hub cavity to manufacturer s recommendations (normally level with and not exceeding cup race level).

Smear grease or fretting corrosion inhibitor on spindle to prevent fretting corrosion.

---

## 06-B OIL LUBRICATION

Coat bearing cones with clean oil.

Place outboard cone back in packaging to prevent contamination.

### 07 HUB SEAL INSTALLATION

Ensure you select the correct seal for the lubricant being used.  
Place inboard cone squarely into its mating cup in the hub.  
Install hub seal following seal manufacturer's procedure using proper installation tool.  
Listen for change in strike pitch that indicates seal is seated correctly.  
Check seal is squarely in position and undamaged.

---

### 08 HUB ASSEMBLY INSTALLATION ON SPINDLE

Use appropriate wheel dolly to align and present hub assembly to spindle squarely without cocking.

---

### 09 ADJUSTMENT – DOUBLE NUT SYSTEM

Inspect adjusting nut threads and overall condition and install hand tight.  
While rotating wheel, use an appropriate torque wrench and socket(s), follow the torque procedure outlined in Table 1 Wheel Bearing Adjustment Procedure .  
Don't forget to back off the adjusting nut the appropriate amount to suit the specific application prior to installing lock washer(s) and jam nut. Note - For single nut self-locking systems consult manufacturer's instructions.

---

### 10 ENDPLAY MEASUREMENT

The adjustment procedure allows the wheel to rotate freely with 0.025 to 0.125mm (0.001 to 0.005 ) end play Attach dial indicator via magnetic base to hub or drum Adjust indicator so plunger contacts spindle face and its line of action is parallel to centerline of spindle (Aluminum hubs - attach the magnetic base to spindle end with the plunger contacting the hub or drum) Grasp wheel assembly at 3 and 9 o'clock and push while oscillating to seat the bearings. Zero the indicator. Repeat the process only this time pull the wheel while oscillating. The indicator movement is the end play in the hub. Make fine adjustments until endplay is within the range specified above Apply any final retention mechanisms.

## 11 INSTALL HUB CAP

Install hub cap using new gasket being careful not to over-tighten bolts as per the manufacturer s instructions.

**Oil lubrication :**

**Add clean oil to hub through provision in hub cap to manufacturer s recommended level.**

**Rotate wheel assembly and recheck.**

**Top up if required.**

### Why choose an induction heater?

Induction heating is a superior, fast and controlled heating method. It is a safe and environmentally friendly alternative for traditional heating methods such as ovens, oil baths or blow torches. These methods cause smoke, fumes or oil waste and are hazardous for personal health and safety.

Timken induction heaters use the principle of induction, similar to a transformer. The heater and yokes remain cool; only the work piece is heated. During the induction heating cycle, a certain degree of magnetism occurs. All Timken heaters demagnetize automatically after each heating cycle.

### Versatility, safety and quality

Timken induction heaters can be used for heating gear wheels, bushings, couplings and other components. Proper mounting lengthens the life span of your equipment, and controlled induction heating helps prevent unnecessary damage.

Digital electronics provide optimal control during the heating process and automatically select the most efficient power supply to ensure balanced and fast heating.

Timken induction heaters are dependable. The robust and easy-to-use designs offer you reliable heaters that are suitable for continuous operation in industrial environments.

◀ Proper mounting allows the load to be transmitted to the ring experiencing the interference fit. This way, mounting forces are not transmitted via the rolling elements, avoiding damage to the raceways.

Proper mounting is essential to ensure long bearing life. Designed to permit the safe, precise and quick mounting of bearings, bushings, sealing rings, cam wheels and pulleys, the Timken Impact Fitting Tool Set features impact-resistant plastic collets, which help to avoid metal-to-metal contact and the resulting shaft damage.

During the mounting of bearings, such as ball and spherical roller bearings, where the faces lie in the same plane, the collets enable the load to be transmitted to the ring experiencing the interference fit. In this way, mounting forces are not transmitted via the rolling elements and hence damage to the raceways is avoided.

## Mechanical Pullers

After the required type of puller has been identified, it is easy to choose the most suitable model from the series listed in the catalog.

Please note: Understanding the work space and possibility of gripping will ensure proper fit of grip.

Compare size and measurement of the part to be removed to the values indicated in the tables to choose the suitable puller. The choice of mechanical puller depends also on required pulling force.

The most important factor is safety. If you're not sure which size puller to use, always choose the larger or stronger one. Three-arm pullers better distribute the pulling force than two-arm devices. Therefore, if there is enough space, three-arm pullers should be the first choice.
